MY AVERAGE WEEK

- Implement and enforce engineering best practices such as regular code reviews, continuous integration, high test code coverage, ongoing code refactoring and adequate documentation.
- Interact with clients and/or project coordinators, understand business requirements and convert them into stories.
- Participate in design & architectural discussions with architects and identify API requirements.
- Build highly scalable UI components in JavaScript libraries & frameworks like Angular and React.
- Implement application business logic, integrate components with the backend APIs and fix all presentational and functional issues.
- Participate in the usual agile scrum ceremonies such as daily standup meetings, demos, retrospectives and planning.
- Collaborate closely with UX team to develop intricate design features and user interactions.
- Continuously discover, evaluate, and implement new best practices to maximize development quality and efficiency.
- Work as an individual contributor as well as mentor junior members in the team and delegate work whenever required.
- Work on proof of concepts (POCs) for new requirements and applications.
