Army Public School, Jalandhar — Apr 1995 - Mar 2007
- Grade 12 - 76%
- Grade 10 - 85%

MY AVERAGE WEEK

- Interact with clients and/or project coordinators, understand business requirements and convert them into stories.
- Participate in design & architectural discussions with architects and identify API requirements.
- Build JavaScript components that are highly scalable and customisable using libraries & frameworks.
- Implement application business logic, integrate components with the backend APIs and fix all presentational and functional issues.
- Participate in the usual agile scrum ceremonies such as daily standup meetings, demos, retrospectives and planning.
- Collaborate closely with UX team to develop intricate design features and user interactions.
- Build pixel perfect, responsive & cross browser compliant layouts using HTML and CSS.
- Mentor junior members in team and delegate work whenever required.
- Work on proof of concepts (POCs) for new requirements and applications.
